Stamford, CT — July 3, 2007 — Solution provider BasWare is partnering with professional services firm RPI Consultants in a deal that will see RPI implement and support BasWare's invoice processing and purchasing solutions for enterprise clients, the two companies have announced.

BasWare is a subsidiary of Finland-based BasWare Corporation, a provider of financial automation process solutions. RPI is based in Baltimore, Md., and specializes in procure-to-pay business process optimization, serving organizations in the healthcare, education and financial services industries.

RPI Consultants will implement BasWare invoice automation solutions to create paperless accounts payable environments; facilitate electronic invoice routing and approval, and streamline data entry; and to enable shared services centers (SSCs) to optimize operations and implement best practices.

"Our clients are looking for products that will reduce the workload of their accounts payable and procurement operations," said Brian Rosenberg, CEO of RPI Consultants. "BasWare's innovative solution to invoice automation is a natural fit for RPI's professional services practice."

"RPI Consultant's highly targeted focus on purchase-to-pay processes is an ideal fit for our solutions," said Jaakko Elovaara, vice president of BasWare. "Given corporate need to efficiently and cost-effectively automate critical business processes, such as accounts payable and purchasing, BasWare solutions are gaining momentum in the marketplace and we're looking to other experts — partners such as RPI Consultants — to bring these solutions to an ever-expanding base of customers."

BasWare's Enterprise Purchase-to-Pay product suite includes Purchase Management, Invoice Processing and Document Archiving, as well as modules for Order Matching and Contract Matching.
